ABI Precious Metals

Palladium Sterling™ Products

ABI offers a variety of this new patent pending casting product that provides you the following benefits over traditional sterling grain (92.5% silver, 7.5% copper):

- Superior casting performance at a temperature only slightly higher than traditional sterling. Scrap is 100% recyclable.
- Increased hardness for more product durability.
- Greater weight density which creates a heavier feel for the customer.
- Brighter and whiter than sterling or rhodium plated white gold.
- Outstanding tarnish resistance which eliminates the need for plating or E-Coating.

When palladium sterling jewelry products are marketed properly to the customer, they perceive it as a premium silver that offers similar benefits to platinum and white gold products at less than half the cost.

Standard Blends: 1.0% PALLADIUM / 92.5% SILVER
3.0% PALLADIUM / 92.5% SILVER
